Subject:	Re: Offensive Cyber

Hi Gary and Pavel
I propose a telco over the weekend where the three of us can discuss the options.
I feel all options are viable and probably not mutually exclusive. We can start with an NSO -like for LTE and develop it into a Lab. Or the other way around. There are pros and cons to each version.
All (1)-(4) ideas worth exploration. I think (1) is the ripest for immediate action.
Other aspects should better discussed directly. Not over emails.
I still believe THE crucial issue is to get the right creative&effective people (.95Pavels). The rest is demanding but more trivial.
Best
EB
